Draft Environmental Impact Statement
for a Geologic Repository for the
Disposal of Spent Nuclear Fuel and
High-Level Radioactive Waste

Comment Sheet

I request that these comments be made a part of the official record.

Violates the Nuclear Waste Policy Act of 1982.

- The fundamental concept of geological disposal as outlined in the act was for waste isolation. Instead the DEIS describes and "evolving" facility design based on delayed release of radioactivity by means of engineered barriers, so the site will leak. How much and when is not clear.

I understand there is a need to dispose of nuclear waste, and am in no way attempting to delay or discourage this activity, but I believe the shipping should be minimal - to a permanent suitable site.

The Yucca Mountain site is a fast flow for ground water making "Viability Assessment", and is with large populations of people. I write to you, to reconsider a better game plan. This also the D.O.E., along with most of is being run by a bunch

Please note: For your comment(s) to be considered in the comment(s) need to be received by the Department of Energy. The Department will consider comments received.
